

Solvent Based Pigment Preparations

TC-Red 3855

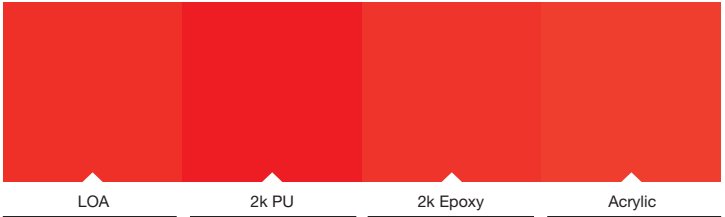

With this new range of solvent based pigment preparations BTC has designed highly concentrated pigment dispersions that deliver excellent results.

Main advantages

- excellent flow & pumpability through lower viscosities
- compatibility for both flocculation resistance and stable colour development
- outstanding hiding power in mid and deep shades
- excellent solubility and compatibility in many types of coating formulations
- optimum colour strength
- durability (fit for purpose)
- reduction in processing time due to higher pigment load
- dust-free atmosphere

TC-Red 3855

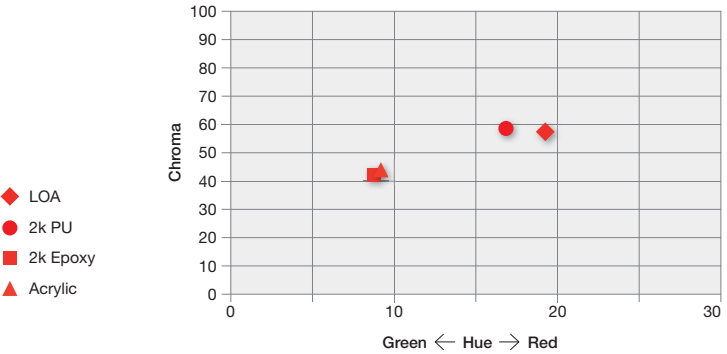

Colour Stability

Optimum colour stability enables universal application possibilities within industrial coatings.

Improved Chroma

Expanding colour space through improved chroma.
