

DEHYPOUND® LLD 60 - A UNIVERSAL SURFACTANT BLEND FOR COMMERCIAL LAUNDRY

Entering the commercial laundry segment in emerging markets gets easier when you can lower the investments for production equipment and formulation development. The surfactant-blend Dehypond® LLD 60 supports this easier start.

It can be used as a single raw material for the manufacture of liquid laundry detergents. The concentration is adjusted only by adding Dehypond® LLD 60 to water (ready-mixed with builders) and the other components for liquid laundry detergents (e.g. enzymes, dye transfer inhibitors, phosphonates and preservatives). Dehypond® LLD 60 is useful for the manufacture of high-performing heavy-duty liquids, color liquids and special detergents for fine fabrics.

BASF has created several test formulations using Dehypond® LLD 60 to enable:

- High performance for heavy-duty liquid and special detergents
- Equal and even superior performance on tested stains
- Better production with limited equipment
- Easy handling - cold process possible; no heating necessary
- Logistical advantages thanks to a reduction of raw materials
